domains, however, are neither necessarily the same nor determined by the number of items ([Rico et al., 2012](#)). More objective approach is in need.

An idealistic solution would be to use test response data ([Deville and Prometric, 1996](#)

knowledge (and associated changes in degrees of freedom) were 86.4(6), 188.9 (6), 46.4 (6), and 21.2(6), respectively. All four improve-
